SUMMARY

Software developer with 3+ years of experience building full-stack web applications and data pipelines using Python, Django, React, and Node.js. Experienced in ETL, workflow automation, AI tooling, and CI/CD. Proven collaborator with a passion for clean, maintainable code, mentorship, and user-focused design.

EDUCATION

Bachelor of Science in Computer Science
Kansas State University
Aug 2018 – Dec 2022
Manhattan, Kansas

EXPERIENCE

Application Developer
Aprio
Jan 2026 – Present
Topeka, Kansas

- Designed and built a multi-source Python ETL pipeline that ingests, cleans, and promotes POS data for 150+ restaurant locations into the production warehouse.
- Automated 100+ daily journal entries, replacing manual preparation with generated entries the accounting team reviews and approves.
- Rewrote the Ratio export from an Automation Anywhere bot into a Python API process, cutting a 20-minute run to under a minute.

Software Engineer (Volunteer)
Rescue River
Mar 2025 – Nov 2025
Kampala, Uganda

- Built a full-stack Node/Express.js and React app with an intuitive interface that made scraper management and data automation accessible to non-technical users.
- Developed a Playwright scraper to collect sales and marketing data from 100+ Google Maps listings per run, with location targeting and structured Excel exports.
- Engineered a fishing report aggregator with Excel input, Playwright scraping, and AI summarization, reducing hours of manual gathering into minutes.
- Developed a comparison utility to align scraper outputs and inputs, closing data gaps.
- Authored setup and usage docs to streamline on-boarding and maintenance.

Software Engineer
Canopy
Feb 2023 – Jan 2025
Manhattan, Kansas

- Helped design, build, and maintain a multi-sheet Excel import feature in Django/Python, simplifying bulk data entry and automating manual workflows.
- Diagnosed and optimized SQL queries and API responses, achieving sub-second average page load times.
- Collaborated with product managers and client success teams to refine workflows and resolve critical bugs, improving overall user experience.
- Engaged in weekly peer code reviews and provided constructive feedback, strengthening overall code quality and accelerating feature delivery.
- Mentored a student developer through weekly code reviews and pair programming, supporting their growth as a software engineer and professional.
